Design and Implementation of an Autonomous Mobile Robot for Slug Detection and Safe Collection to Prevent Agricultural Damage

Nabil Miri, Jana Marzouk, Abdulrahim El Mohamad, Yahya Aljamal, and Hassan Hariri

Fighting Slugs in an ethical way

Rafik Hariri University

x

SPEXAL SARL

Problem:

Plants Pests:

- Decimate emerging crops
- Significant impact on yield

Harmful Types:

- Black keeled slugs - Reticulated slugs
- Costing UK farming about £43.5m a year

Spot:

- Heavy soils and wet areas in the high rainfall area
- Active after rain
- Poorly drained soils

Traditional Solutions:

Coffee Grounds

Aroma

Slug Pellets

Detriment effect on environment

Weather dependent

[metaldehyde]

Hand Picking

Manual and tiring

Traps

Ineffective

Smart Solutions:

- Slugbot 2001 (University of West England)

- Last public article in 2013
- University of West England's Intelligent Autonomous Systems Laboratory
- TIME 2001 invention of the year
- Use rotting slugs bodies to generate electricity

CMOS image sensors

Smart Solutions:

- Slugbot (Small Robot Company, CHAP, COSMONiO and AV and N Lee)
Still under development

- Detection based on morphological features using Multi-spectral imaging
- Spraying system
- Used for big arable farms

Our Solution:

SLUGYBOT

MODEL: YOLOV5 TRAINED ON CUSTOM DATASET

YOLOv5 is a model in the You Only Look Once (YOLO) family of computer vision models.
YOLOv5 is commonly used for object detection.

Small	Medium	Large	XLarge
YOLOv5s	YOLOv5m	YOLOv5l	YOLOv5x
14 MB _{FP16} 2.0 ms _{V100} 37.2 mAP _{COCO}	41 MB _{FP16} 2.7 ms _{V100} 44.5 mAP _{COCO}	90 MB _{FP16} 3.8 ms _{V100} 48.2 mAP _{COCO}	168 MB _{FP16} 6.1 ms _{V100} 50.4 mAP _{COCO}
